❖ Fiber types and applications

Tight 900 µm fiber

Possibility to remove the 900 µm coat at the distance of 3-5 cm

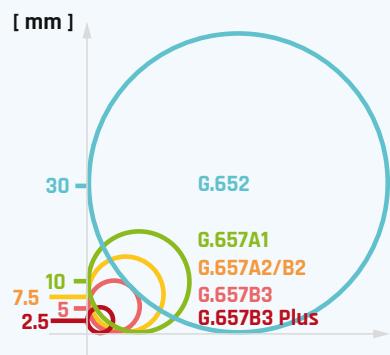

Semi-tight 900 µm fiber

Possibility to remove the 900 µm coat at the distance of 20-40 cm

Easy strip 900 µm fiber

Possibility to remove the 900 µm coat at the distance more than 100 cm

At present, low loss and pure quartz optic fibers with max. 0.17 dB/km attenuation at 1550 nm wavelength and max. 0.31 dB/km at 1310 nm wavelength are ready for use. Low loss and pure quartz optic fibers have at least 0.02 dB/km lower spectral attenuation in comparison to the standard ones G.652D. In such fibers, the retention of flat spectral characteristics within the transmission windows provide the possibility of achieving substantially smaller deviations of attenuation:

- 1310 nm (+ 20 nm / -35 nm) wavelength – max. deviation is 0.03 dB/km
- 1550 nm (+ 25 nm / -25 nm) wavelength – max. deviation is 0.02 dB/km with the retention of 1625 nm attenuation 0.20 dB/km.

The chromatic dispersion complies with ITU-T G.652 and the polarizing at the level of $\leq 0.04 \text{ ps}/\sqrt{\text{km}}$ of these fibers provides the possibility of using such fibers in high- speed systems e.g. transmission of 10 GBit/s or even higher. Low loss fibers which are obtained in the pure quartz technology can work properly in telecommunication networks at the distance of even thousand kilometers far, which significantly limits the number of necessary amplifiers and repeaters in a fiber optic connection.

Applications

- Distribution cable
- For laying in risers
- FTTH feeder
- Easy access and installation

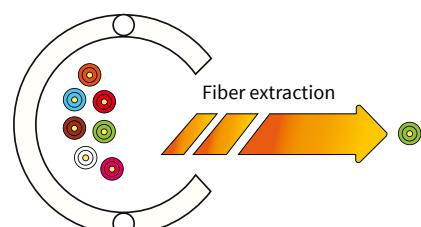

Features

- FRP strength members inside cable jacket
- Optical fibers in bundles
- 2-24 elements in cable
- LSZH UV resistant outer jacket (ivory by default, various color available)

Operating temperature

4. Dielectric strength members in the jacket

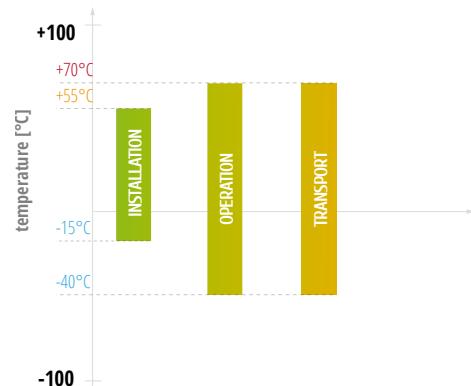

Applications

- Optical access cable with aramid yarns reinforcement
- Direct buried design
- Fully dielectric cable
- Last mile connection
- High crush resistance (3.5kN)
- Installation into existing ducts or direct buried

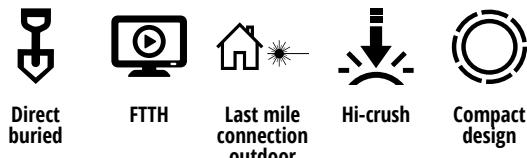

Features

- Central loose tube (PBT) with filling compound
- Up to 12 optical fibers (250 µm)
- Aramid yarns as strain relief and water absorbent
- Embedded FRP strength members
- Highly resistant outer jacket made of hard polyolefin material, UV resistant

4. Embedded strength members (FRP)

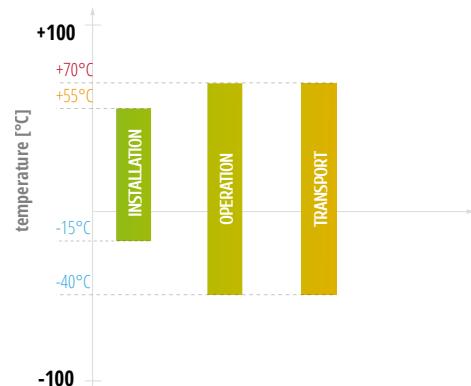

❖ Applications

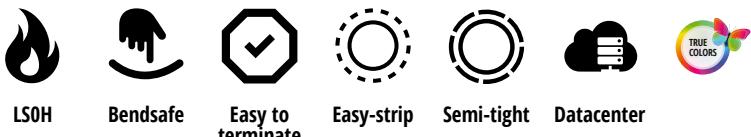

- Optical access cable with glass yarns reinforcement
- Direct buried design
- Fully dielectric cable
- Last mile connection
- High crush resistance (3.5kN)
- Installation into existing ducts or direct buried

❖ Features

- Central loose tube (PBT) with filling compound
- Up to 24 optical fibers (250 µm)
- Aramid yarns as strain relief and water absorbent
- Embedded FRP strength members
- Highly resistant outer jacket made of hard polyolefin material, UV resistant

Application and cable span characteristics

Wind load: max 72 km/h

Ice load: max 5 mm

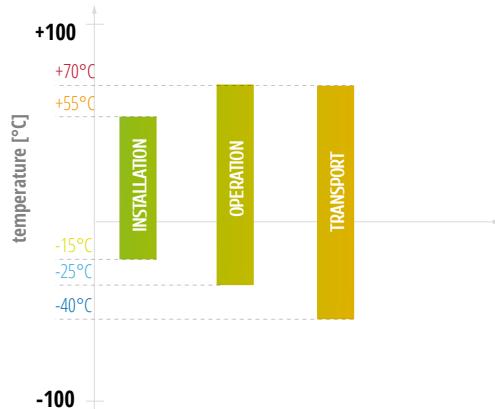

Applications

- Drop cable for FTTH networks
- Optical access cable with aramid yarns reinforcement
- Direct buried construction
- Fully dielectric cable
- Last mile connection
- Suitable for aerial, façade installation

Features

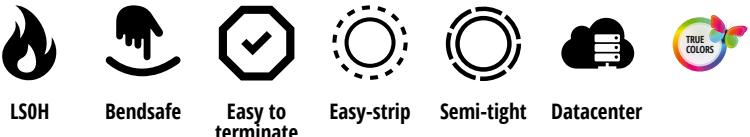

- Aramid yarns as strength and water absorbent elements
- Tight buffer or modules with optical fibers
- ITU-T G.657A2 optical fiber(s)
- Embedded strength members (FRP)
- Highly resistant outer jacket made of HDPE material
- UV stabilized

MICRODUCT MK-LX9

Applications

- Microduct cabling air-blowing system
- Metro networks
- Flexible network design
- Distribution network

Features

- HDPE, UV stabilized outer jacket with low friction
- Loose tubes (and fillers), SZ stranded around the CSM
- PBT tubes containing up to 12 optical fibers
- Smallest diameter for blowing into 12 mm (ID) ducts

Operating temperature

Technical copper wire characteristics	
Max DC resistance	24.0 Ω/km@20°C
Conductor material	Bare copper
Conductor cross section	0.75 mm ²
Insulated conductor dia.	2.2 mm
Insulation material	PVC

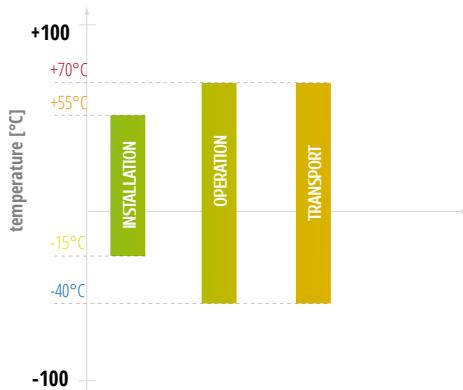

❖ Applications

- For installation into existing duct or directly buried
- High tensile and crush performance

Features

- FRP strength and anti-buckling element
- Insulated copper cores 0.75mm² (\varnothing 2.2mm)
- Loose tubes with filling compound (PBT \varnothing 2.2mm)
- Tape and dry yarns to prevent moisture into the cable
- Fiberglass yarns as strain relief elements
- UV stabilized HDPE outer jacket
- Other outer jackets materials available
